

A brief note

In long-term engagement with communities, often the poor and the underprivileged, anthropologists are responsible for demonstrating the importance of social, cultural, and ontological diversity for resilience, adaptation, and sustainable innovation. The role of anthropologists is broader than understanding cultural nuances; it is also about actively incorporating them into designing and implementing effective and culturally sensitive sustainable development initiatives. This approach fosters inclusive and adaptable strategies for sustainable development. The seminar will focus on Sustainable Development Goals (SDG) from this backdrop.

Sub-themes

- ◆ *Economic inequalities*
- ◆ *Food security*
- ◆ *Health*
- ◆ *Education*
- ◆ *Water*
- ◆ *Sanitation*
- ◆ *Work*
- ◆ *Cities*
- ◆ *Climate change*
- ◆ *Tribal Development*
